

Models 15A, 13A, and 13HA Pneumatic d/p Cell® Transmitters

The Foxboro® brand Models 15A, 13A, and 13HA pneumatic d/p Cell transmitters measure differential pressure and transmit a standard pneumatic signal to receivers which may be several hundred metres or yards away.

PROVEN DEPENDABILITY

Foxboro d/p Cell Transmitters have been the standard of process industry ever since they were developed and introduced for sale more than 30 years ago. Many thousands of successful, trouble-free installations have demonstrated the exceptional dependability of these outstanding transmitters.

APPLICATION VERSATILITY

These transmitters are used in flow, liquid level, density, and low pressure measurement applications. They offer wide span adjustability and

broad zero suppression and zero elevation capabilities within the range limits for each series. They are ideal for the most demanding applications.

EASE OF MAINTENANCE

The simple design of the topworks and the field-replaceable capsule makes servicing these transmitters exceptionally easy and economical. Interchangeability of most of the topworks parts with other Foxboro pneumatic force balance transmitters provides further savings to the user by minimizing spare parts inventory.

- a. See Optional Capsule Materials Model (13A Only) for span limits of 13A4 (Monel capsule construction).
- b. Nonzero-based ranges require an optional zero elevation or suppression kit. See Suppressed-Zero and Elevated-Zero Ranges. Upper and lower range values must not exceed range limits. Negative numbers indicate a higher pressure on the normal "low side" of the transmitter.

Mounting

Transmitter mounts direct to the process piping or onto a nominal DN 50 or 2 in pipe. A bracket for pipe mounting is always supplied.

Air Connections

The supply and output connections are tapped for 1/4 NPT.

Output Signal

20 to 100 kPa, 3 to 15 psi, or 0.2 to 1.0 bar or kg/cm, as specified.

Air Consumption Under Normal Operation

0.42 m³/h (0.25 cfm) at standard conditions.

Suppressed-Zero and Elevated-Zero Ranges

The optional zero elevation or zero suppression kits (Model Code Optional Selections -L or -R) allow adjustment of the measured pressure range within the full range limits of the capsule. These kits may be added in the field. Refer to Figure 1 and Figure 2 for examples of suppressed-zero and elevated-zero ranges.
